Map File Cabinet Solution

## *High Capacity – Quality Construction*

When walking into the Town of Manchester's new and highly organized office space, you get a feeling of professionalism and efficiency. Meeting with Tina Cagle, Town Clerk and Patrick Gilbert, Town Manager you realize that looks are not deceiving. They strive every day to give their town the best services possible. This team uses the latest in technology including GIS and Digital Terrain Models to see their towns past, present, and make important decisions about their future.

One element of their office was not in keeping with this high standard of operating. It was their map storage. Town of Manchester had rolled their maps, and these rolled maps were stored in various places in the office. No Map File Cabinets.

> *"We are really satisfied and I would recommend these Ulrich high capacity map files for anybody who is looking to solve a storage problem."* Patrick Gilbert, Town Manager

They needed a Map File Cabinet and wanted the best. Tina Cagle, Town Clerk led the investigation into the right Map Files for their office. "When looking for the a Map File we had a few criteria that we felt were most important:

- ***High Capacity***
- ***Quality Construction***
- ***Document Protection***
- ***Space Saving***
- ***Made in the United States***

The Ulrich Cadfile met all of our criteria," says Tina.

Tina stated, "We have loaded all of the documents in our two Map File Cabinets, the folders help organize documents, and we can't wait until we have completed the index cards to make it really easy to find any document when required. It was especially important to us to find a product that was made in the United States."

"We really like them a lot.", states Patrick Gilbert, Town Manager, "We like them because they are well built, they are a solid piece of equipment." See video

The Ulrich Cadfile holds 1,000 documents. Comes equipped with 20 heavy duty folders for excellent document protection and organization. Heavy duty casters to allow them to be moved anywhere in the office. One Cadfile replaces two map drawers while using 75% less space, and at a better price.
